

## THE MOOD PLAYER INTERPRETATION OF BODY LANGUAGE

Ants Patrik Maran, Founder - @apmaran - ants@ulocs.com

# THE MOOD PLAYER

INTERPRETATION OF BODY LANGUAGE

## EMOTIONS

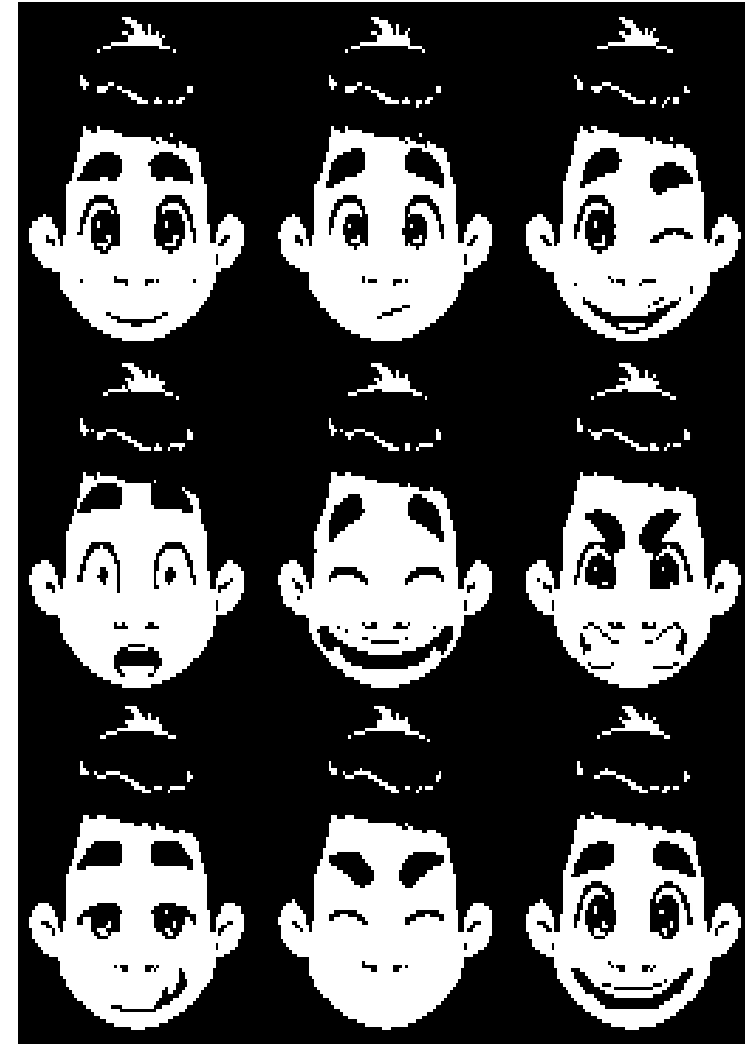

6 PRIMARY:

FEAR, JOY, LOVE, SADNESS, SURPRISE & ANGER

Followed by secondary and tertiary emotions they form the combined mood spectrum.

ULOCS sets out to detect PHYSICAL response to emotional changes by interpretation of the body language.

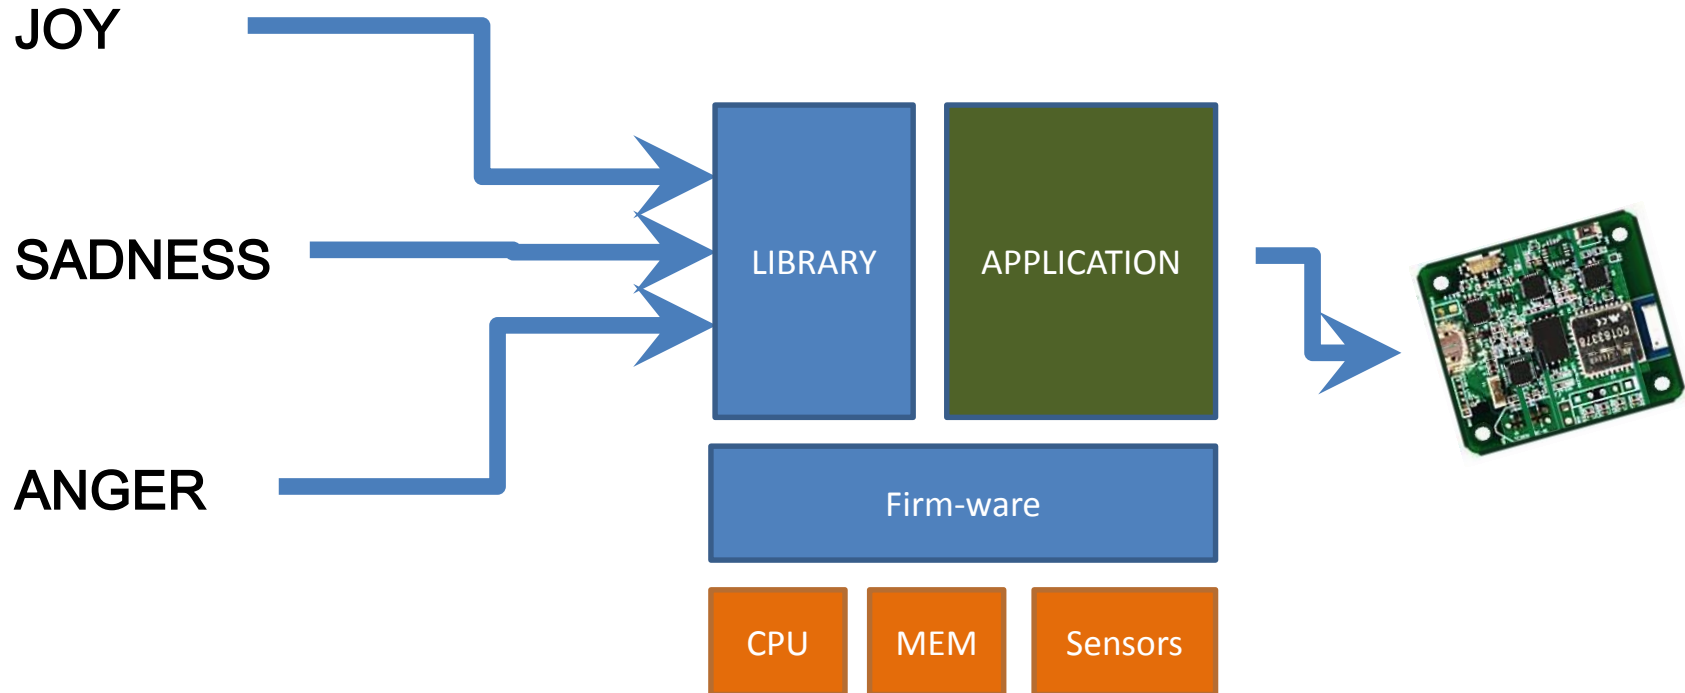

Focus on JOY, SADNESS & ANGER areas.

Vision & Platform

# Ulocs

We believe that the future of wearable technology lies in making them intelligent enough to predict the future of each wearer.

# Ulocs say

whether it is  
precise prediction  
of the next move,  
position, action or  
mood change doesn't  
matter as long as  
we deliver an  
outstanding service  
to the wearer.

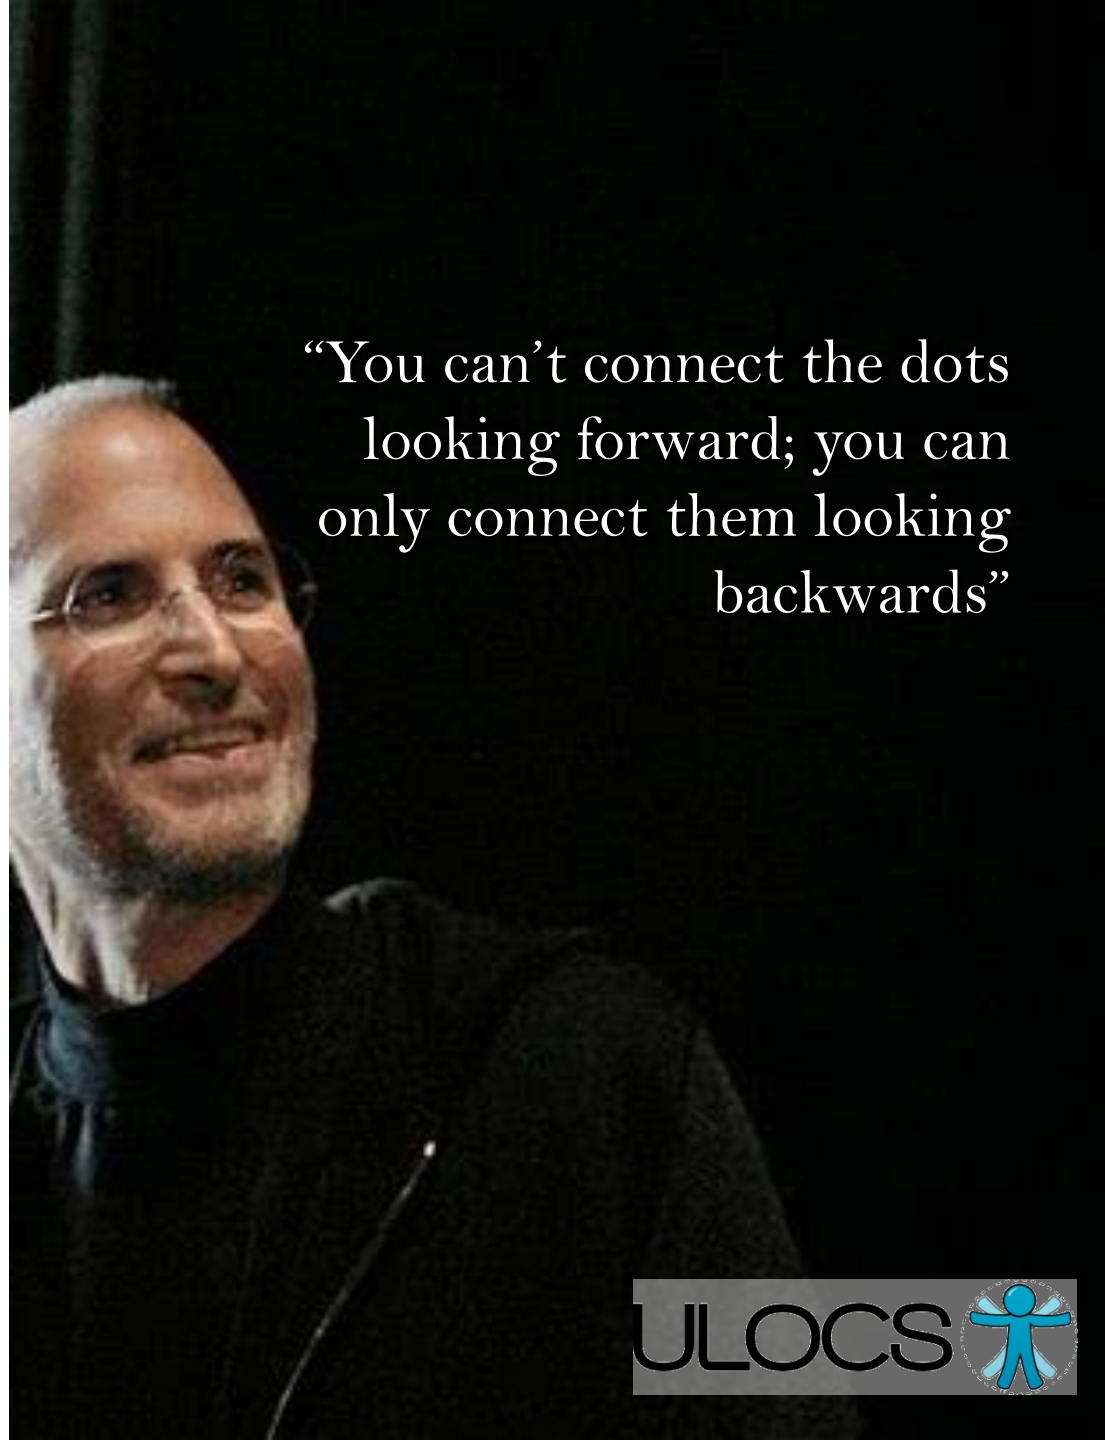

# Ulocs predicts

That by delivering  
real, actual  
meaning and value  
based on predictive  
intelligence to our  
lives we will  
expand the wearable  
tech market many,  
many times.

“You can’t connect the dots  
looking forward; you can  
only connect them looking  
backwards”

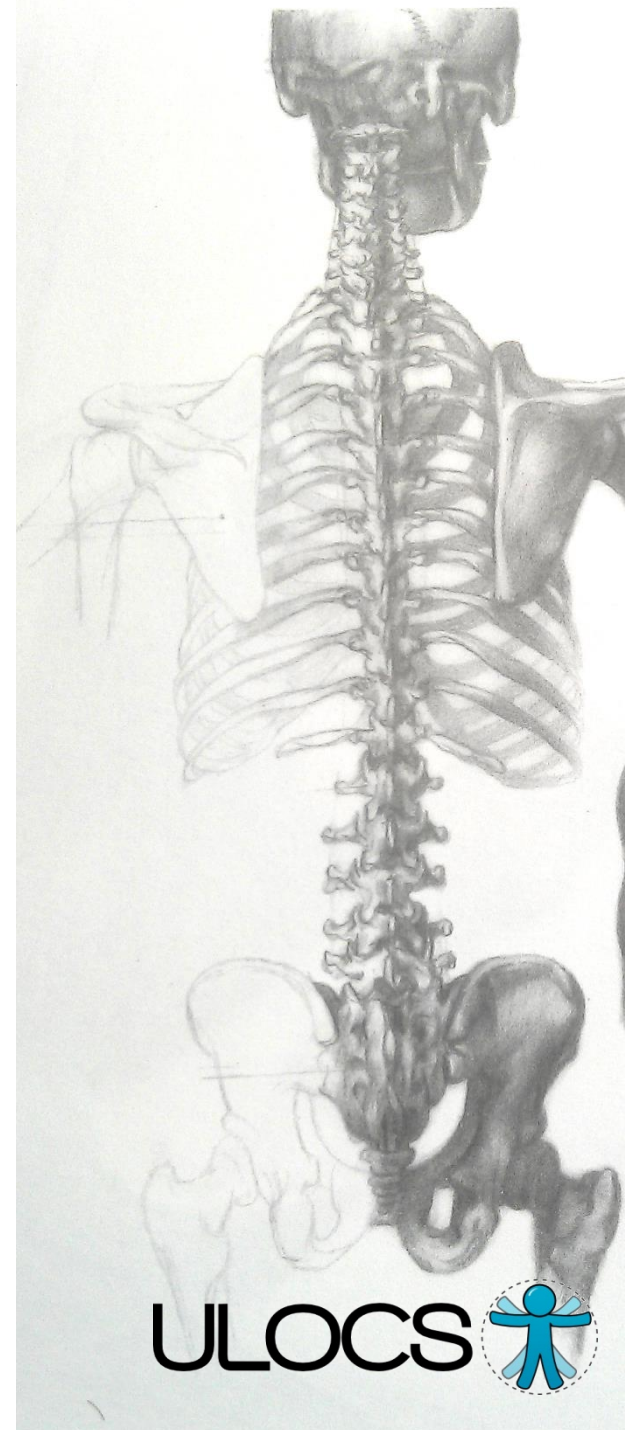

# Understanding the difficult patterns

Ulocs technology looks at the difficult patterns in movement analysis from body parts, ligaments, muscles and the interaction.

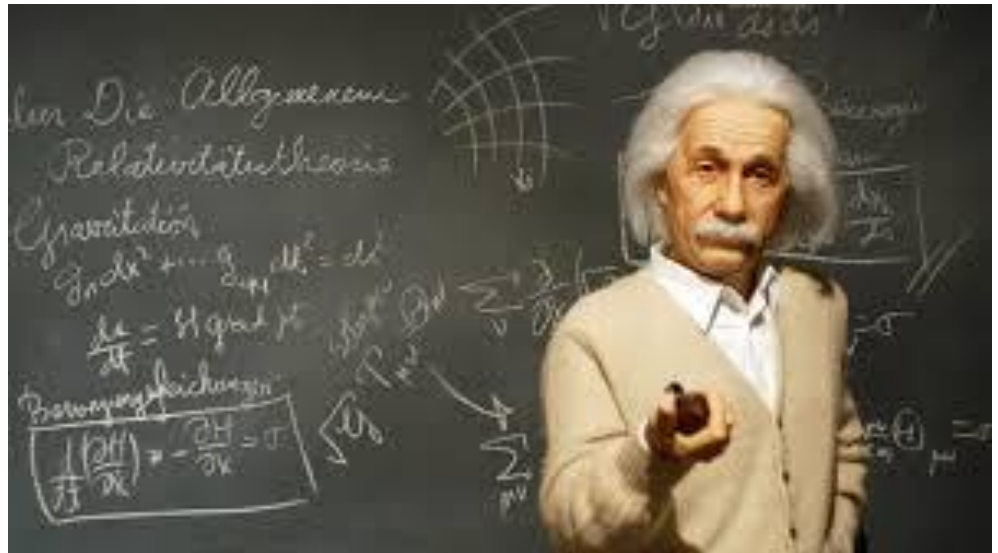

Interpreting the unique individual input and translates it into intelligent output.

# Key to Differentiation

ULOCS  goes beyond traditional wearable technology and build precise data models of the individual but in context of dynamic pattern libraries based on:

- Physical status
- Mental state
- 3D posture
- Positioning

These four in combination brings a superb advantage to any wearable tech product. The device can actually understand, profile and coach you. Anywhere.
